

RELIWASH

# Redcap™

Eye Wash & Skin Flush  
for Acid and Alkali Splashes  
Phosphate Buffer Solution

- Reduced flushing time
- Reduced volume of fluid
- Reduced patient discomfort
- Reduced risk to first aider

After eye or skin contact with acid or alkalis, it is only seconds before the pH value is significantly altered, and the corrosive damage may lead to permanent injury. Acid and alkalis must be quickly neutralised to a pH value equal to the normal level in the eye or on the skin. The use of ordinary water or 0.9 % sodium chloride will only provide a limited degree of effective dilution with an increased flushing time.

**Redcap™ Phosphate Buffer Solution has a neutralising effect which significantly reduces the flushing time and the volume of fluid required to dilute and neutralise acid and alkali splashes\*.**

Quicker neutralisation, especially on the face, can relieve the distress of feeling 'underwater' from flushing, the first aider is also better protected from becoming a secondary victim whilst in contact with the contaminant.

The range of Redcap™ Phosphate Buffer Solutions, Chemical Splash Stations, and Kits, ensures there is a product perfectly suited to enable first responders to achieve this goal. Easy-to-squeeze bottles, allow the eye or skin to be irrigated easily and efficiently, reducing the risk of severe injury caused by acid, alkali, or particulate contamination.

5990 Reliwash Redcap™ 500ml Bottle with Eye Cap  
Sterile 500ml Bottle

5991 Reliwash Redcap™ 500ml Bottle  
Sterile 500ml Bottle

*\*It is recommended to continue flushing with water or saline eye wash until medical help arrives.*
